

WeRateDogs Report

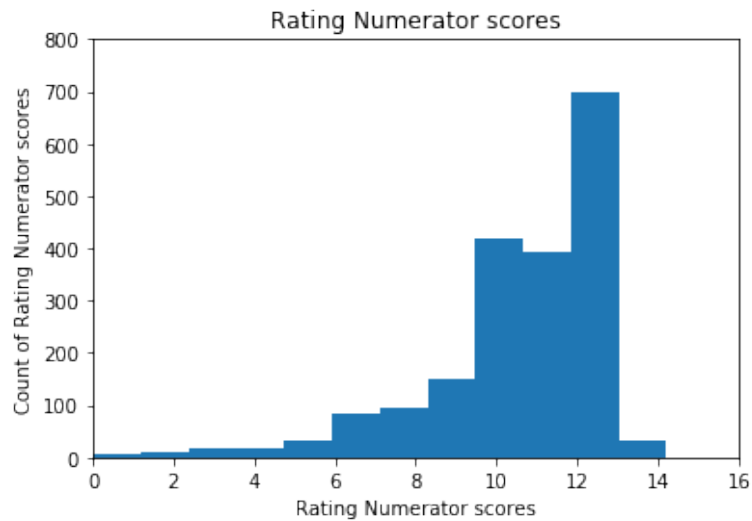

It appears that the popular Twitter account WeRateDogs has a steady fanbase. While the account doesn't quite live up to its initial fanfare and the enthusiasm has died down, the account is still going strong with occasional bursts of high activity. The popular account humorously rates pictures of dogs and rates them very highly, frequently giving ratings that exceed 10 out of 10. Why do the dogs deserve such high ratings? Because they're good dogs of course.

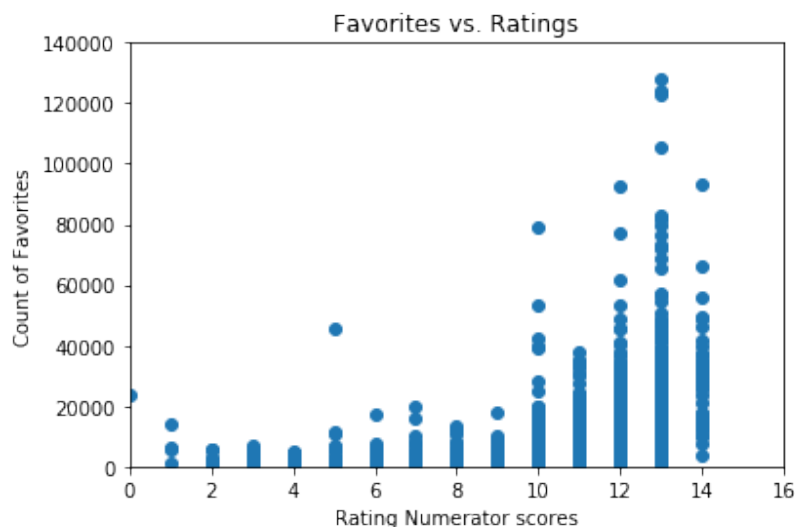

We can see in the favorites chart that while the highs will still rise up to the 80,000 mark, it never reaches the past the 100,000 favorites like it used to do. There is still a clear fanbase, but it is no longer as supportive as it was in the heyday of WeRateDogs.

There is a similar story with retweets, although not as prominent. In particular, there is a spike at tweet index 794, which was a particularly poignant tweet about one of the dogs who responded in 9/11 who had passed away. WeRateDogs continues to put forward a genuinely sincere love of animals through their humor context.

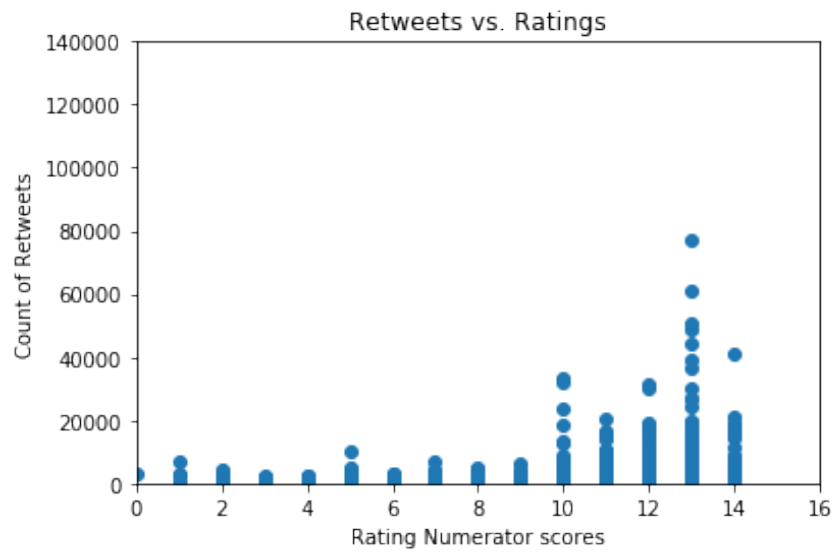

While ratings were almost always out of 10, the numerator frequently went above ten, as shown above. This was partly for humor's sake. But we can also see that most dogs were rated between 10 and 13 and that there was a tendency to rate dogs higher (>6) than lower (<5). Again, a sincere love of animals with a humorous context.

This rating generally tracked well with favorites. The higher the rating, the higher the favorites. There were outliers. For instance, a picture that was rated as 0 received ~20,500 favorites, most likely because it was a humor picture of an entirely different animal to a dog and given a 0/10

rating as though it were a dog. There is also a slight dip in favorites at dogs rated 9, but overall as dogs are rated higher, they are favorited more.

There is a similar story with retweets, but on a less pronounced scale. Again, retweets increase as ratings increase, with a major rise in retweet rates for ratings > 10.
